Anti-slip tapes & treads

**Jessup introduces...**  
**New 60 & 24 Anti-Slip Grit Sizes to Help You Prevent Slips & Falls**

### Why Jessup anti-slip?

The U.S. Bureau of Labor Statistics reported 244,000 workplace injuries related to workplace slips and falls. The average time lost for each incident was 13 days.

Jessup's Safety Track<sup>®</sup> family of anti-slip tapes and treads are designed specifically to help you avoid becoming a statistic. With the addition of two new standard grit sizes – 60 and 24 – you have more choices than ever in finding the right product for your specific workplace needs.

For example, 60-grit is intended for general purpose applications such as for factory floors, ramps, and warehouses. The 24 grit is a great way to reduce the slip and fall risks on off-road, earth-moving equipment and agricultural equipment.
